Reading 4:

Air pollution is a serious problem in many cities. Motor vehicles, factories and other sources create so much air pollution that it may hang in the air like dirty fog. Air pollution threatens the health of the people who live in cities. City wastes cause water pollution when they are poured into the waterways. These wastes kill fish and make some areas unfit for swimming. In addition, many large cities have difficulties in disposing of their garbage. The amount of garbage grows each year, but places to put it are quickly filling up. Citizens, governments, industries, scientists, and business people must work together in different ways to gradually reduce pollution. For example, most cities have introduced recycling programmers.

1. Motor vehicles and factories are among some sources of air pollution.
2. Air pollution does not endanger people 's health in some cities.
3. Garbage disposal is a problem in many large cities.
4. We can reduce pollution by recycling programmers only.

Reading 5:

As we know, energy is very important in our modern life. People use energy to run machines, heat and cool their homes, cook, give light, transport people and products from place to place.

Most energy comes from fossil fuels such as petroleum, coal and natural gas. However, population is increasing and countries industrialize, the world's demand for energy is increasing. At the present time, gas and oil are expensive. Fossil fuels are limited and in a few decades, they will run out. Moreover, burning fossil fuels cause pollution. Therefore, scientists are trying to look for alternative sources of energy. They realize that the supplies of nature such as sun, wind, water... are unlimited and they are clean sources of power. They have proven that these can become important sources of energy in the future.

1. Sun, wind, water are fossil fuels.
2. Energy consumption is increasing because of the industrialization.
3. Most energy comes from the supplies of nature such as sun, wind, water.
4. Natural gas can become important sources of energy in the future.

Reading 6:

Garbage is the most serious problem in the United States. Every year, Americans produce 308 billion pounds of garbage (about 140 billion kilos). A lot of garbage goes into landfills, but there are not enough landfills for all the garbage. One answer to the garbage problem is recycling. About half of all the garbage in the USA can be recycled and used again. Recycling helps people solve the landfill problem and save natural resources. For examples, tires can be recycled to make pipes and floor coverings; glass is collected and sent to the factories to make into new glassware. Moreover, household and garden waste are collected to make compost. Therefore, everybody should know how to protect the environment and save natural resources.

1. People all over the world produce 308 billion pounds of garbage every year.
2. To solve the problem of garbage, Americans have to recycle it.
3. About 50% of the garbage In the USA can be recycled and used again.
4. Things which can be recycled are tires, glass and even waste around houses.
