**TASK 1: READ THE TEXT AND COMPLETE THE SENTENCES:
(EXERCISE 4/ P.77) (HS LÀM TẠI STUDENT’S BOOK)**

4 **THINK!** Read the text.
Complete the sentences. ?

1 You shouldn't share computer passwords because
..... ?

2 We shouldn't overuse online connections as this
..... ?

3 Copying other people's work must be avoided because
..... ?

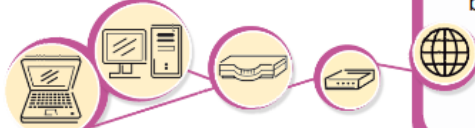

4 If we are on the lookout for computer viruses, then
..... ?

USING A COMPUTER NETWORK

Networks are groups of computers, software, and hardware that are all connected to help the users work together. They are specially made for use in businesses, schools and colleges, Internet cafés, and libraries. A network connects computers by using cabling systems, special software, and devices that handle the flow of data. A network allows users to share files and resources, such as printers, as well as send emails to each other. So, as with any other shared resource, it is important to be responsible and think about other users. There are a number of things to keep in mind when using a computer network, such as:

- Do not share computer passwords.
- Do not overuse resources such as online connection time or printers.
- Do not use it for anything illegal, unethical, or dishonest (e.g., bullying other students or damaging equipment).
- Do not copy other people's work – either other students' or online information. This is called plagiarism and has serious consequences especially concerning copyrighted material. Remember information on the Internet may not always be copyrighted, but it is there to give you facts and ideas for your own writing.
- Do not install any software without permission.
- Be aware of computer viruses and try to protect the network from them by following security procedures.

TASK 2: EXERCISE 5/ P.77 (HS LÀM TẠI STUDENT'S BOOK)

*** WORD FORMATION**
